I am an early-career programmer with approximately 1 year of internship and freelance experience. I mainly use Python for automation scripts, CSV processing and small data analysis tasks with pandas. I have also used Git for personal repositories.

During my internship at NorthStar Services from July 2025 to June 2026, I automated weekly spreadsheet reports and cleaned customer data using Python. I wrote simple SQL queries for SQLite but did not work on production web APIs or cloud deployments.

For a personal expense tracker, I wrote a command-line Python program that imports bank transactions from CSV files and creates monthly summaries with pandas and Matplotlib. The project is a local command-line tool without a web framework, production database or container deployment.

I completed a B.A. in Economics from Avadh University in 2025. I am currently learning backend development, REST concepts and software testing through online courses.

My strengths include careful documentation, communication and willingness to learn. I speak English, Hindi and Urdu and enjoy reading technology articles.
